This chapter studies Digital (or Electronic) Government in Latin American (LatAm) countries from a comparative perspective. It analyzes a group of countries with a significant degree of economic diversity and public service development. The chapter examines the role of digital government in the public administration of the region, focusing on its impact on public sector efficiency and accountability. It also discusses the challenges and opportunities that digital government presents for the Latin American region. The chapter concludes by highlighting the potential of digital government as a tool for improving public governance in the region.
